

5. Sketching

Even though I haven't used it as much as I wanted to it did help me get a better idea for what I wanted to do. I used the method sketching as a way to iterate on my ideas.

When I had some rough concepts (for example after I made mind maps), I used to draw it out to get a clearer understanding of the whole idea. In the end I could really start iterating because I could visualize everything. For me it answered questions like how can I make this? Is this even possible? It was also a way for me to get all the random ideas in my mind into one solid idea.

The goal for this method was to get a clearer understanding of what I had in mind and how to improve it by making it visual.

This method can be combined with:

- Mind Maps
- Interview
- Prototyping
